Message from Director General

The emerging technologies globally have noticed substantial adoption in 2017, and that's a beacon to the tremendous growth in economic spheres in future. STPI is also working to create an ecosystem so that industry, startups and MSMEs of IT sector can also leverage these disruptive technologies for their growth and also for the benefits of the mankind at large.

The year 2017 witnessed a remarkable journey in terms of disruptive technologies – some technologies registered momentous adoption and some technologies left indelible marks for groundbreaking innovations that would muster growth in the coming times. Nevertheless, disruptive technologies dominated 2017 in a far more meaningful way than ever before.

While artificial intelligence, machine learning and blockchain captured the imagination of technology bellwethers as how mankind can leverage these technologies for optimizing automation and transparency, Internet of Things (IoT) saw a massive adoption in sectors like manufacturing, retail, healthcare and supply chain. Manufacturing sector dominated the growth of IoT connection in 2017 with a spike of 84% in comparison to 2016. Retailers harnessed the potential of IoT by connecting with customers through smart sensors. IoT and mobile devices were being used by retailers for location-based services, which provided in-store personalized experience to customers.

As emerging technologies such as artificial intelligence and machine learning applications have become more varied, investments by venture capitalists have significantly increased. According to a research report published by KPMG, the venture capital investment in artificial intelligence and machine learning has grown to USD 12 billion in 2017 from USD 6 billion in 2016 globally. The sharp rise of funding in artificial intelligence indicates that this emerging technology has certainly a bright future globally. In 2017, Indian AI startups fared rather well. According to a research report, Indian AI startups raised USD 87.85 million across 58 deals.

In 2017, blockchain technology got a massive traction in sectors like financial services, real estate, supply chain, governance and energy distribution. Globally, blockchain startups attracted around USD 2 billion VC funding in 2017. Indian startups focused on blockchain were not far behind their global peers. A number of startups developed blockchain-based applications in the domains of banking, capital market, governance, supply chain, healthcare and pharmaceuticals amongst others. Many state governments in India exhibited their interest to create use cases for adopting blockchain in e-governance.

In no uncertain term, the emerging technologies globally have noticed substantial adoption in 2017, and that's a beacon to the tremendous growth in economic spheres in future. STPI is also working to create an ecosystem so that industry, startups and MSMEs of IT sector can also leverage these disruptive technologies for their growth and also for the benefits of the mankind at large. India has already established itself as a global leader in IT services sector. To sustain this leadership position in technology domain, India needs to focus on building software products based on these disruptive technologies. I am sure India is well-poised to leave an indelible mark in emerging technologies in research & innovation and their applications in various industries. These technologies have enormous potential to bring underprivileged people to the mainstream and provide them humongous opportunities for economic progress. To make this possible, we need collaboration amongst industry, academia and government organizations to ensure faster adoption of emerging technologies in all spheres of life in India and share the benefits to all sections of the society.

Virtual Clone: Reaping The Benefits of Outsourcing

Entrepreneurs invariably across the world come from all walks of life as individuals determined to shape their own future and that of those around them by taking initiatives and risks to create wealth and ensure economic progress of society. They are the people who see the world not as it is, but as how it should be in times to come. They take life by the horns and shape their own destiny along with that of societies. A similar story burgeoned in 2009 when the founder of Virtual Clone, Mr Vipul Kataria pursued his passion to establish a venture to provide world-class online services to clients globally.

Today, Virtual Clone is a pioneering virtual assistant service provider based in India catering to its clients with its virtual presence across the globe. Its aim is to offer prompt, affordable and customized services to individuals and organizations based in UK and Australia. Headquartered at Steel City, Bhilai, Chhattisgarh, Virtual Clone with its team of skilled professionals ensures that each task is carried on with precision and completed on time.

Virtual Clone started their first project with X Movement (then called Aussie X) - a company based in Canada. X Movement's idea was to provide in-school physical activity and mindfulness programs that build life skills and help to create a positive school climate.

As a BPO service provider, Virtual Clone administers and supervises business processes for other companies. The Company either uses new technology or applies an existing technology in a new way to improve client's particular business process. It mainly develops applications which automate everyday workflow of a company so that operations can be smooth and efficient. Virtual Clone offers diverse services such as recruitment research and employee mapping technical support, forms processing, data processing, bookkeeping and web research.

To support BPO process and custom application services, the Company also provides comprehensive IT support to help accomplish the business targets by taking care of all the IT needs of clients. The trained professionals at Virtual Clone monitor desktops and workstations, manage servers, and facilitate IT requirements of new employees. Moreover, Virtual Clone offers a range of services such as website maintenance, social media management, and search engine optimization.

Virtual Clone has come a long way in these 9 years. From few members to 33-members strong team, the journey of Virtual Clone has been exciting. The Company today gets the maximum repeat business from its existing clients – a corollary to the fact that the focus on quality excellence in every bit of delivery has really paid off.

Along the successful journey of Virtual Clone, STPI has played a significant role by providing infrastructural and statutory support. "Relation of Virtual Clone and STPI started in 2011. STPI provided excellent infrastructure and statutory support aimed at furthering the growth of Virtual Clone. STPI provided 24x7 power supply, leased line internet connection, network security support and other infrastructure facilities that helped the organization grow from strength to strength," says Mr Vipul Kataria.

BPO Unit Inauguration Under IBPS

Employment Generation At Regional Level

A comprehensive review on the performance of India BPO Promotion Scheme (IBPS) for Tamil Nadu and Puducherry was conducted by Shri Ravi Shankar Prasad, Hon'ble Union Minister of Law & Justice and Electronics & Information Technology on 23rd December 2017 at Chennai.

During the review meeting, Dr. Sanjay Tyagi, Director, STPI-Chennai explained the progress of implementation of IBPO Scheme in Tamil Nadu and Puducherry in detail.

Hon'ble Minister had an exclusive interaction with the IBPS units located in Tamil Nadu and Puducherry and he emphasized on the employment generation in Tier II & III cities. While reviewing performance of BPO units, the Minister appreciated the efforts of industries and entrepreneurs for starting operations under IBPS in the state.

Further, the Minister invited big companies like Amazon and Newgen to start operations in other states like Bihar, UP, MP and Rajasthan.

In the state of Tamil Nadu and Puducherry, 4200 seats have been allotted under IBPS at the end of 5th round of RFP. After the 5th round, 23 eligible companies have been allocated seats to set up BPO/ITES operations. The major area of activities carried out by the BPO units are banking, NBFC, e-Learning, Typesetting, e-commerce, e-publishing, Helpdesk for PDS etc.

Total Employment Reported	723

* CoO-Commencement of Operation

Dr. Omkar Rai, Director General, STPI inaugurated the ITES unit of M/s Luminous Infoways under India BPO Promotion Scheme (IBPS) on 31st October 2017. While inaugurating the BPO centre he touched upon the future roadmap of STPI for the growth of IT/ITES/ESDM industries. The company applied for 100 seats in the bidding.

Founded in 2001, Luminous Infoways is a CMMI Level 3, ISO 9001:2008 & ISO 27001:2013 certified company. Luminous Infoways provides efficient & cost effective high quality system implementation, configuration, maintenance & service and became a trusted partner in delivering the proper business process solution to its clients.

Luminous Infoways has delivered value added proven solutions and services to over 1000 customers across various geographies with more than 600 applications under maintenance. It offers a proven integrated portfolio of IT & IT enabled services in both open source & Microsoft Technologies.

It has signed MoU with Govt. of Odisha for reform based RTI (Right To Information) implementation in about 25,000 offices & also implemented the e-blood bank initiative which is the first of its kind in the entire country.

Bengaluru Technology Summit 2017

Electropreneur Park Driving Technology Innovations

Under the aegis of Ministry of IT and Electronics, Electropreneur Park (EP) primarily aspires to contribute to the ESDM growth story of India. This has been achieved through creation of a holistic eco-system for encouraging R&D, innovation, Entrepreneurship in the ESDM sector in India. EP emphasizes on the development of product and IP creation in the ESDM sector especially in the CAREL identified 6 mass consumption electronics products. As a project, the Electropreneur Park is envisioned for a period of 5 years with a target of successfully incubating 50 startups.

The EP has a state-of-the-art lab equipped with a diverse range of facilities comprising assistance in funding via network of angel and venture funds, mentoring by Industry veterans and successful entrepreneurs holding leadership roles, free credit and discounted rates from associated partners and financial support for prototyping from CSR corpus. The EP has successfully completed three seasons and currently the selection of incubatees for the fourth season is underway. In the three seasons, EP as a project is on its way to achieve the target of 50 incubatees in 5 years as there have been some tremendous achievements made by the incubatees. Currently, EP has 12 incubatees and the first three seasons have seen 9 IPRs being filed and 12 new products developed in the field of medical electronics, building automation, automotive, IoT and education. The continued success has paved the ideal road for establishing EP as a world-class brand in incubation ecosystem.

STPI has been promoting the IT/ITES/ESDM industry in Karnataka in association with Govt. of Karnataka through BengaluruITE.Biz event.
